### Cohomological dimension - Wikipedia

A group  $G$  has cohomological dimension 0 if and only if its group ring  $RG$  is semisimple. Thus a finite group has cohomological dimension 0 if and only if its order (or, equivalently, the orders of its elements) is invertible in  $R$ .

Groups of Cohomological Dimension One RICHARD G. SWAN Department of Mathematics, The University of Chicago, Chicago, Illinois 60637 Communicated by Saunders MacLane Received January 18, 1969 Stallings [29] has recently shown that all finitely generated groups, of cohomological dimension one are free. His methods are a remarkable combination of topological and algebraic ideas. Unfortunately

### Cohomological dimension - Encyclopedia of Mathematics

The cohomological dimension of a topological space relative to the group of coefficients is the maximum integer for which there exists closed subsets of such that the cohomology groups are non-zero. The homological dimension is similarly defined (cf. Homological dimension of a space).

on groups of finite cohomological dimension 461 is a normal series of  $G$  so that all the factors  $B_{i+1}/B_i$  are abelian groups, then the Hirsch number  $hG$  is the sum of the torsion-free rank of  $B_{i+1}/B_i$  for

#### A COHOMOLOGICAL CHARACTERIZATION OF HYPERBOLIC GROUPS - Math

My work to find a cohomological characterization of hyperbolic groups is motivated by the result of Stallings-Swan, that free groups  $F$  are characterized as those of cohomological dimension 2, i.e.  $H_2(F;A) = 0$  for all  $F$ -modules  $A$ .
