Protein identification from two-dimensional gel ...

Separation of proteins by two-dimensional gel electrophoresis (2-DE) coupled with identification of proteins through peptide mass fingerprinting (PMF) by matrix-assisted laser desorption ionization time-of-flight mass spectrometry (MALDI-TOF MS) is the widely used technique for proteomic analysis.

Two-dimensional gel electrophoresis - an overview ...

Two-Dimensional Gel Electrophoresis. Two-dimensional gel electrophoresis (2-DE) is a key tool for comparative proteomics research. In 2-DE, mixtures of proteins are separated by charge (isoelectric point, pI) in the first dimension and further separated by mass in the second dimension on 2-D gels.

Abstract. Two-dimensional gel electrophoresis (2-DE) with immobilized pH gradients (IPGs) combined with protein identification by mass spectrometry (MS) is currently the workhorse for proteome analysis. 2-DE allows separation of highly complex mixtures of proteins according to isoelectric point (pI), molecular mass (M_r), solubility, and
