for the rigorous analysis of critical phenomena in classical spin systems and of the continuum limit in quantum eld theory. Among the results obtained by random-walk methods are the proof of triviality of the 4 quantum eld theory in space-time dimension $d \leq 4$, and the proof of mean-eld critical behavior.

The subject of this book is equilibrium statistical mechanics, in particular the theory of critical phenomena, and quantum field theory. The central theme is the use of random-walk representations as a tool to derive correlation inequalities. The consequences of these inequalities for critical-exponent theory are expounded in detail.
